

Rescue cards for Passenger cars

Mercedes-Benz • AMG • McLaren • Maybach • smart

Mercedes-Benz

Mercedes-Benz

Preface

Dear Reader,

One of Mercedes-Benz's main priorities has traditionally been to guarantee the highest possible standards of safety.

A comprehensive safety concept extends to providing rescue crews with specific information about our vehicles and their safety systems.

The top priority of the rescue crew is to save lives. The rescue team must be able to gain access to the accident victims as quickly as possible without exposing them or themselves to additional danger.

In order to do this, the rescue services must be properly trained. In addition, knowledge of vehicle-specific accessibility options and of the function and operation of the safety systems is absolutely essential.

In addition to its *“Guidelines for Rescue Services”*, Mercedes-Benz now produces *“rescue cards”* providing information in condensed form for many model series and models **dating from the start of production in 1971** (from 1995 for campers).

Vehicle owners and emergency services can download the rescue cards from the internet free of charge.

The rescue cards are produced in full color. This helps you understand and take in the content quickly. For this reason, we strongly recommend that you ***print the cards in color***.

Daimler AG

Technical Information and Workshop Equipment (GSP/OR)

Note

The body reinforcements marked on the rescue card generally identify those areas of the vehicle which require significantly greater effort to cut using standard tools. The references to body reinforcements are therefore restricted to those areas where cutting may be necessary in order to rescue the victims, and of which the crew chief should be aware.

This document, including all its parts, is protected by copyright.

Any commercial processing or use requires the previous written consent of Daimler AG, Department GSP/ORR, HPC R822, W002, D-70546 Stuttgart, Germany.

This applies in particular to reproduction, distribution, alteration, translation, microfilming and storage and/or processing in electronic systems, including databases and online services.

How do I find the correct rescue card?

Models and variants

Each Mercedes-Benz rescue card is applicable for one model series.

Model variants within a model series (e.g. gasoline or diesel engine) are identifiable on the rescue card by means of appropriate item numbers in the illustrations and the corresponding legends.

Occupant protection systems

The type and number of airbags, emergency tensioning retractors etc. in the vehicle is not evident from the vehicle's model or variant designation.

The occupant protection systems are therefore illustrated with the maximum possible equipment. This gives rescue crews an overview of where occupant protection systems might be installed in the vehicle.

Determining the vehicle model from the vehicle ident. no.

Identification plate on the vehicle:

Please refer to the operator's manual to find out where the identification plate is located in your vehicle.

Example of vehicle ident. no. (see illustration on the right)

WDD2120xx1Axxxxxx

In this example the vehicle is a model 212; the 0 identifies it as a sedan.

Your vehicle can be additionally identified by means of the year of manufacture and by the vehicle illustrations on the rescue card.

The relevant rescue card can therefore be found under Sedan - Model 212

Identification plate, example of an E-Class sedan, model 212

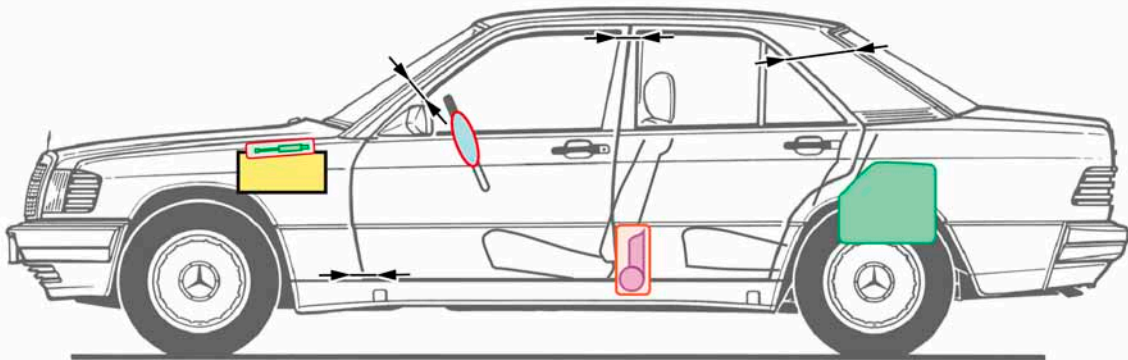

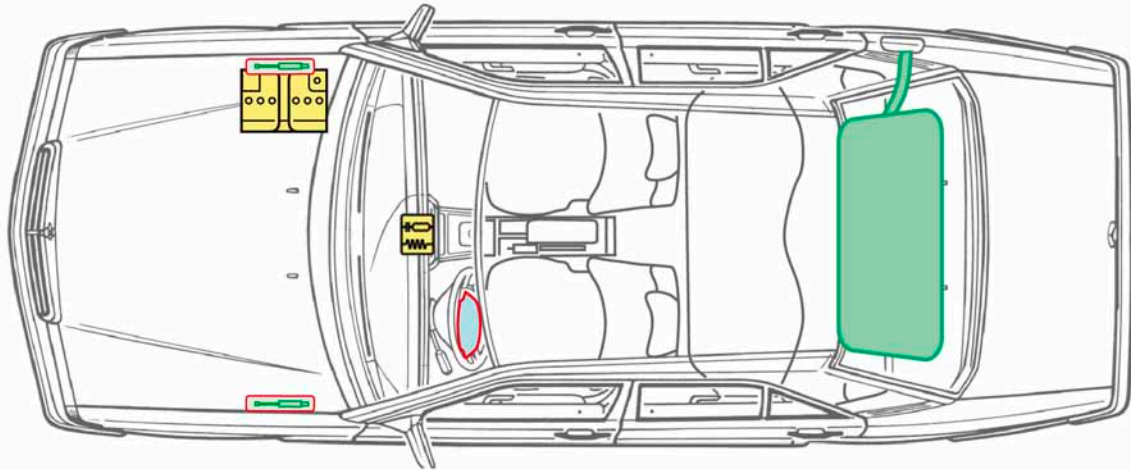

- A The first 3 letters and numbers are the world manufacturer code
- B Digits 4 to 6 indicate the vehicle model
- C Digit 7 indicates the body type

Body types:

- 0 Sedan
- 1 Long sedan
- 2 Station wagon
- 3 Coupé
- 4 Convertible/roadster
- 9 Special editions (e.g. GLK)
